THE PRODUCT

SanLight Valet Stand is a sculptural and multifunctional floor-standing clothes stand.

Consisting of a 1.90 metre high parallelepiped, it has one open side and three closed sides with sheets of milk-white polycarbonate flanked by enamelled steel grids: the open side provides access to the internal compartment in which a rotating tube with two separate supports can hold jackets, coats, hats and bags. The base is equipped with wheels that allow the object to be moved easily, or rotated to hide the objects it contains from view. SanLight Valet Stand is also equipped with two different LED light sources: one inside with a power of approx. 33 Watts, and one on top with a power of approx. 66 Watts. The internal light source, thanks to the milk-white polycarbonate sheets, provides soft, diffuse lighting; the external light source, directed upwards, provides more intense, glare-free lighting.

SanLight Valet Stand is equipped with an internal device that, by means of the combined reaction of the air sanitised by UV-C light and photocatalytic oxidation, together with the use of an efficient filter, makes it possible to destroy - with an active natural principle - pollutants, in particular bacteria, viruses, mould and odours, reducing the infective charge of the environment and of the clothes stored in it.

- ▽ Colours: White: RAL 9010 and colours on request
- ▽ Requires 230V power supply
- ▽ **SanLight Valet Stand** ▽ Dimensions: 66 x 66 x 190 cm
